EXPERIENCE

WEB DEVELOPER

2022 - Now

BentoBook - Trading Journal
https://bentobook.io

- Sole creator and developer of a comprehensive Trading Journal Web App, designed and built from scratch using Vue 3, Firebase 9, and Quasar Framework.
- The app provides a seamless experience for users to record, analyze, and visualize their trades, fostering effective decision-making in their investment strategies.
- Built real-time synchronization with Firebase 9, ensuring that user's trading data is constantly updated, secure, and accessible from any device.
- Leveraged Vue 3's Composition API in conjunction with Quasar to create a responsive, modern UI/UX, tailored to both novice and professional traders.
- Integrated various trading platforms through APIs, offering a comprehensive and customizable trading journal solution.

WEB DEVELOPER

2022 - 2023

Chibits NFT DAPP

- Lead developer for Chibits, an NFT Dapp that was built with Vue.js, Tailwind, Supabase and Solidity.
- The app features an ERC-721A gas-optimized mint process, ERC-721 token staking dashboard and ERC20 token based marketplace with admin dashboard.
- Staked NFTs earn rewards in the form of an ERC20 token that can be used to purchase various items in the marketplace.
- Vue.js wasused to build the front-end interface and Web3.js was used to connect the front-end to the back-end Solidity contracts and deployed on the Ethereum testnet/mainnet.

WEB DEVELOPER

2021 - 2022

AQUA PWA

- Developed a progressive web app inventory system for Android and Web using the Quasar framework and Vue.js. The PWA also includes database storage, authentication and email sign-up through Google Firebase.
- Integrated a barcode scanner for METRC tags using the devices native camera and geolocation that assigns tags to individual plants.
- Collaborated with growers to build a room-based system to track crops, light cycles and daily tasks.

WEB DEVELOPER

2020 - 2021

Marshmallow

- Developed a web app to track client trades and generate invoices based on trade profit.
- Front-end was built with Quasar and Vuejs.
- Database storage, email sign-up & authentication was through Google Firebase.
- Worked closely with client to implement various features, including assigning admin privileges using Firebase cloud functions.

WEB DEVELOPER

2019-2020

Stacks

- Worked with concentrate companies in Colorado to build an inventory management system.
- The front-end was built with Vue.js and Vuetify.
- Database storage, email sign-up & authentication through Google Firebase.
- Included separate tracking for each stage of the extraction process, such as trim on hand, current oven runs/status & finished packaged product.

ABOUT ME

Hello! My name is Brandon & I work as a front-end developer. My passion for web development started back in late 2016. It started as a hobby and after a few years of learning I started working as a freelancer.

I started out learning basic HTML, CSS & Javascript and transitioned to front-end frameworks such as React & Vue. I really love the simplicity of Vue and have used it on all of my recent projects. I have a little back-end experience as well with MySQL and PHP. Backend-as-a-Service providers such as Firebase and Supabase are my favorite technologies to use for back-end.

SKILLS

Programming languages
Javascript (ES6), HTML, CSS3, PHP (Basic)

Frameworks and Libraries
Vue 3, Vuex/Pinia, Vue CLI, Node.js, Tailwind, Quasar, Vuetify, Echarts, Chart.js, ApexCharts, Electron, Express, jQuery

Databases
Firebase 9, Supabase, MongoDB, MySQL (Basic)

Tools and Platforms
Git, Github, Netlify, Heroku, Vite, Webpack

Design
Photoshop, Illustrator, Sketch, Figma

INTERESTS

Anime, video-games, FX and Crypto trading, movies, golf, travel, anything tech-related
